Who we are

Atom Designs is an architecture design studio that is driven by ideas and meanings, and that seeks to transcend the limitations of buildings.

Having Experience of more than 13 years in architecture design in mega projects and Iconic buildings design, we see ourselves as one of the most unique design studios in the Region.

What we Do

Atom Designs is committed to designing and delivering exceptional architectural solutions that ensure the enduring timelessness of our creations.

Our **vision** is to construct enduring structures that transcend time by designing them around the user to convey a profound message.

How we do it

In **Atom Designs**, we concentrate on R&D but with a new approach, by taking time to have a deep knowledge and understanding of clients' needs and requirements and doing a detailed research on the culture of the users and the location itself.

Localizing the project will make have a greater impact

In **Atom Designs**, we believe the design process is an enriching journey that we eagerly embark on with our esteemed clients.

Design Process

Our design process is simple but **unique**; we have multiple **meetings** with clients during design so we can **engage** them with our process so they can see the building as **extension** of them selves.

We encourage clients to **speak** with us, tell us what they **experience**, what they **imagine** and how they want the project to be, not in term of technicalities but in term of how it' s going to be used.

Design Process

Step 01

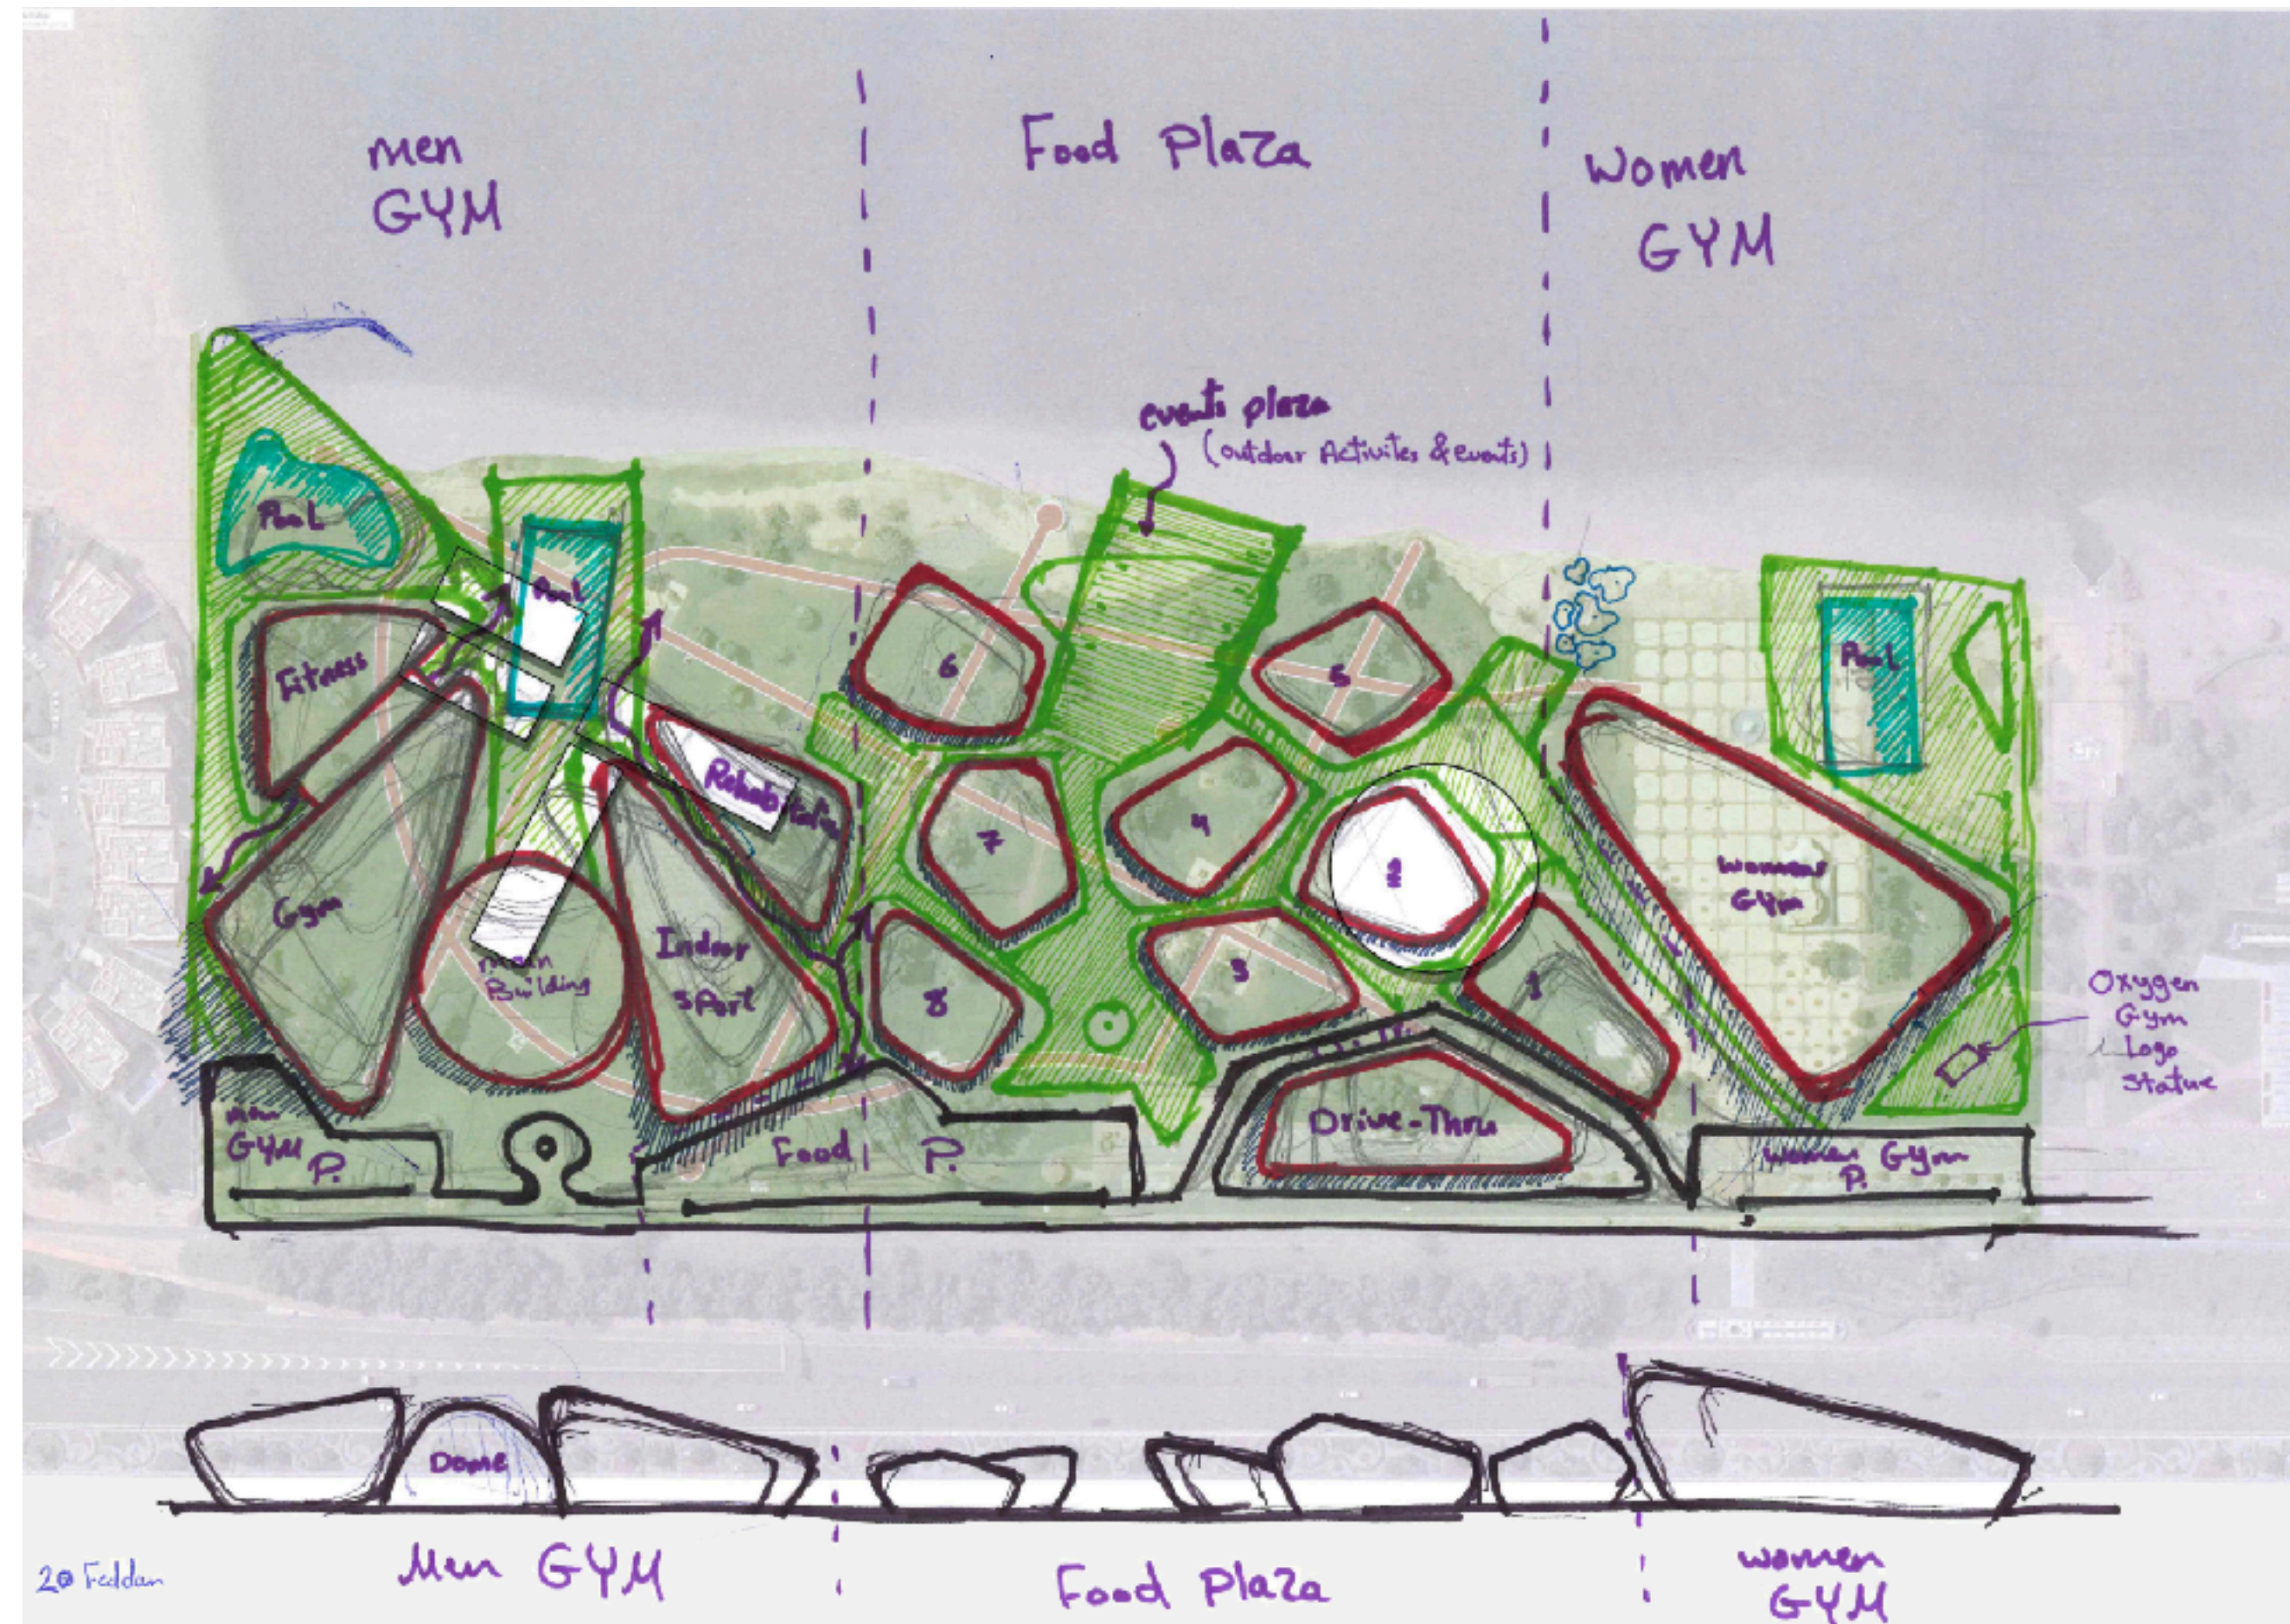

First we start with gathering the data; starting from official data that is provided by client and authorities and ending with site conditions. In parallel we start our R&D.

We explore the site, how it was, how community sees it, how client sees it, the context around us, History of the City and country, etc.

Design Process

Step 02

Secondly we start with sketching, either physically or digitally. We love to explore ideas and see them; and we share those sketches with clients.

Design Process

Step 03

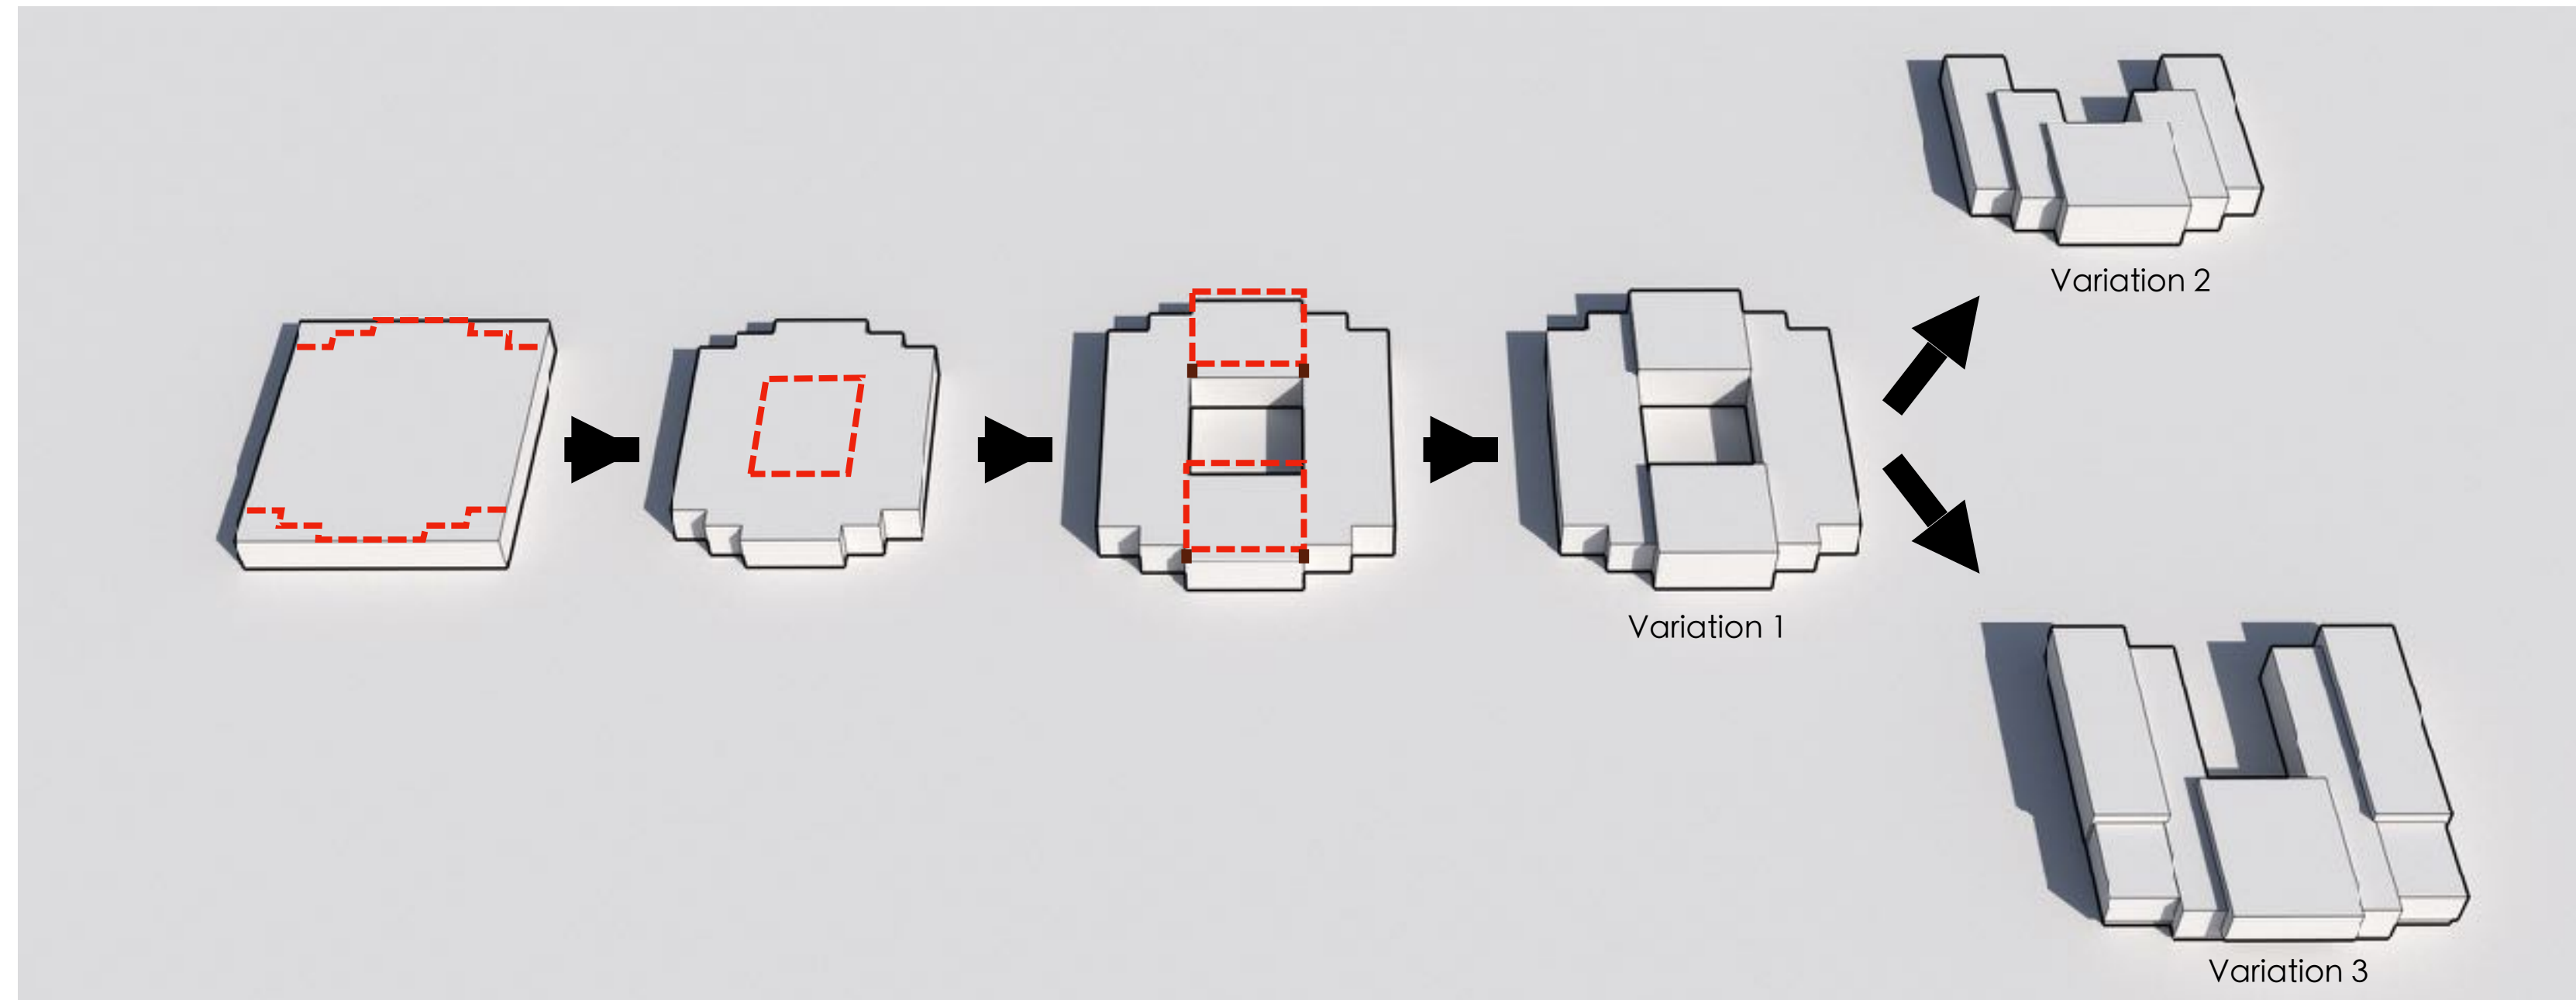

After exploring the various ideas and concepts of how we going to approach our design, we start applying those concepts in drawings.

Our philosophy is that form follows concept; and function is mandatory.

Design Process

Step 03

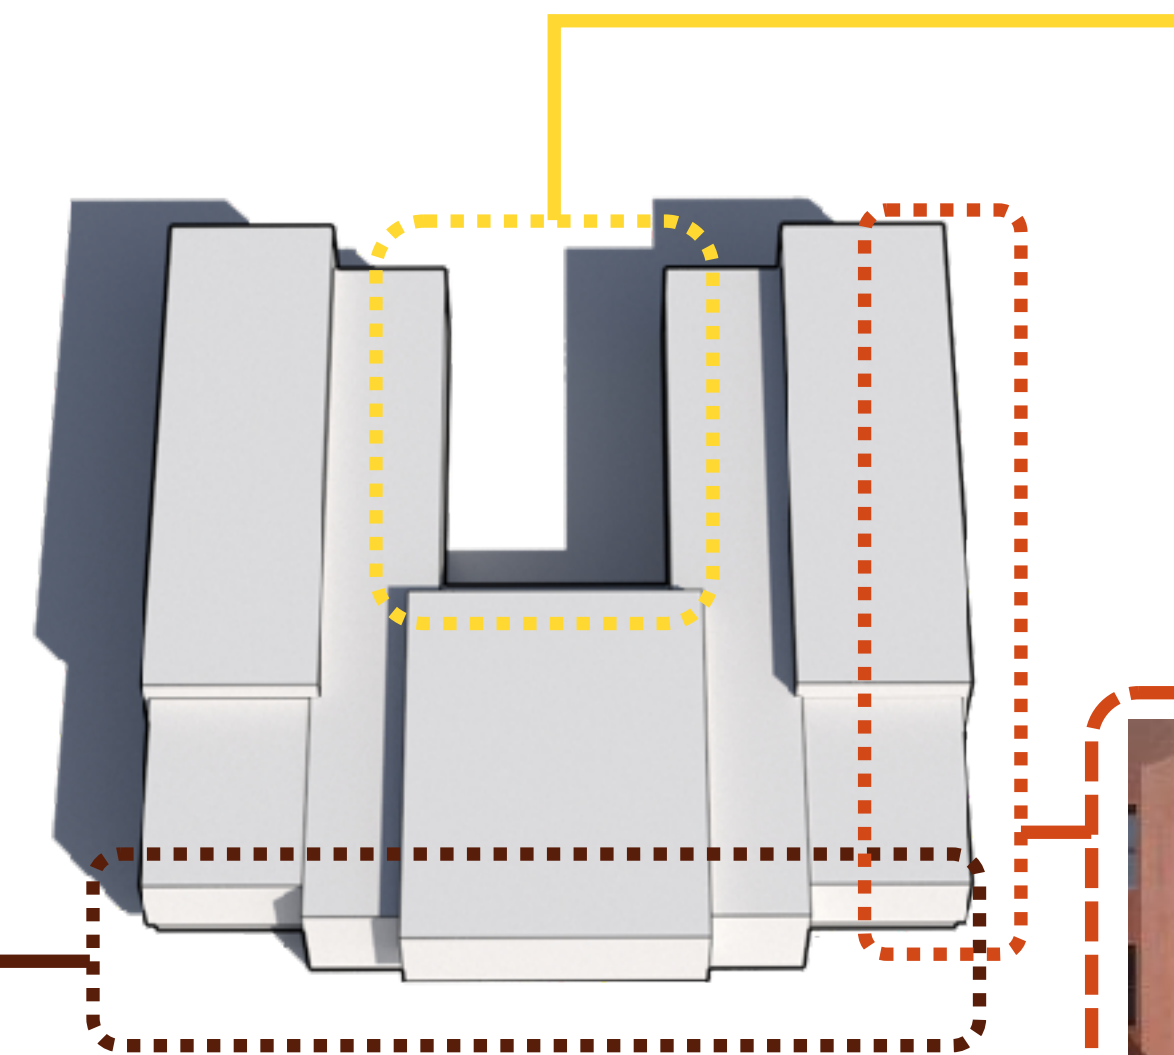

Exploring the masses leads us to verify the concepts we sketched before and we need to make sure that those forms and concepts will achieve the function and the expected goals of the project.

Design Process

Step 04

Delivering the first draft of the Design is one of the most important milestones of the process because now we are going to verify the Design with client or select on of the multiple options we explored earlier. That's why we don't take this step lightly.

Private yet Humane
Formal yet Modern

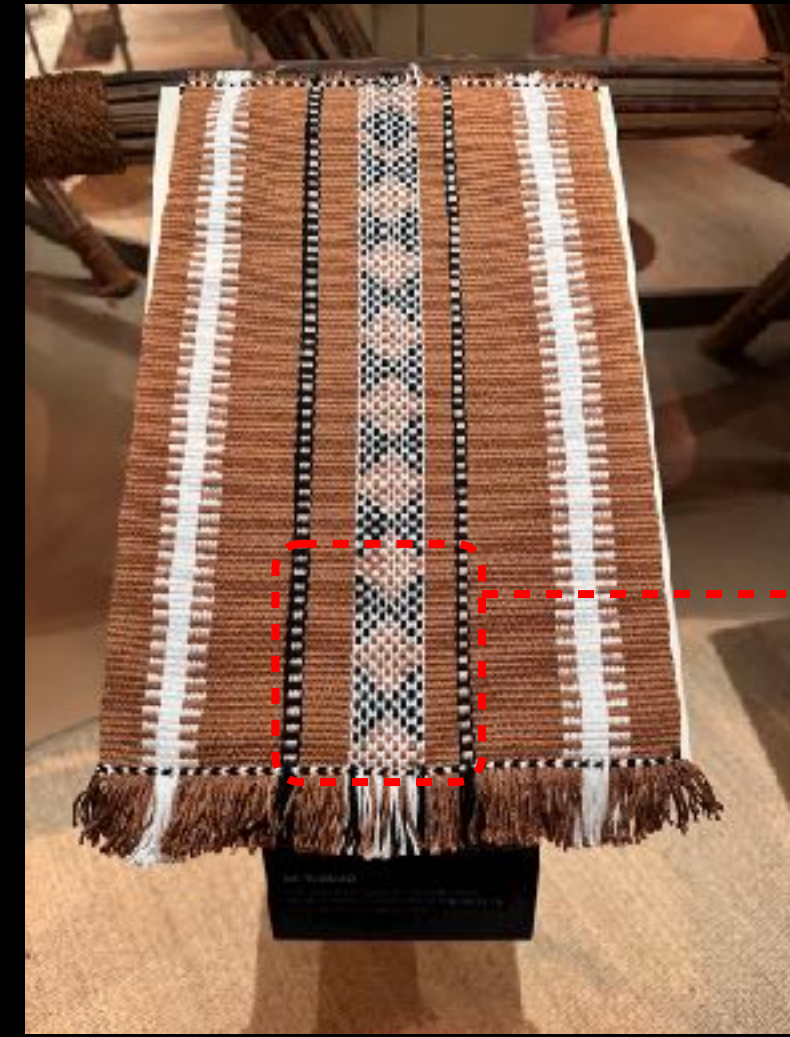

Design Process

Step 05

Upon client approval, we delve into the intricate details and intended message to craft user-centric and human-centered spaces that cater to users' specific needs.

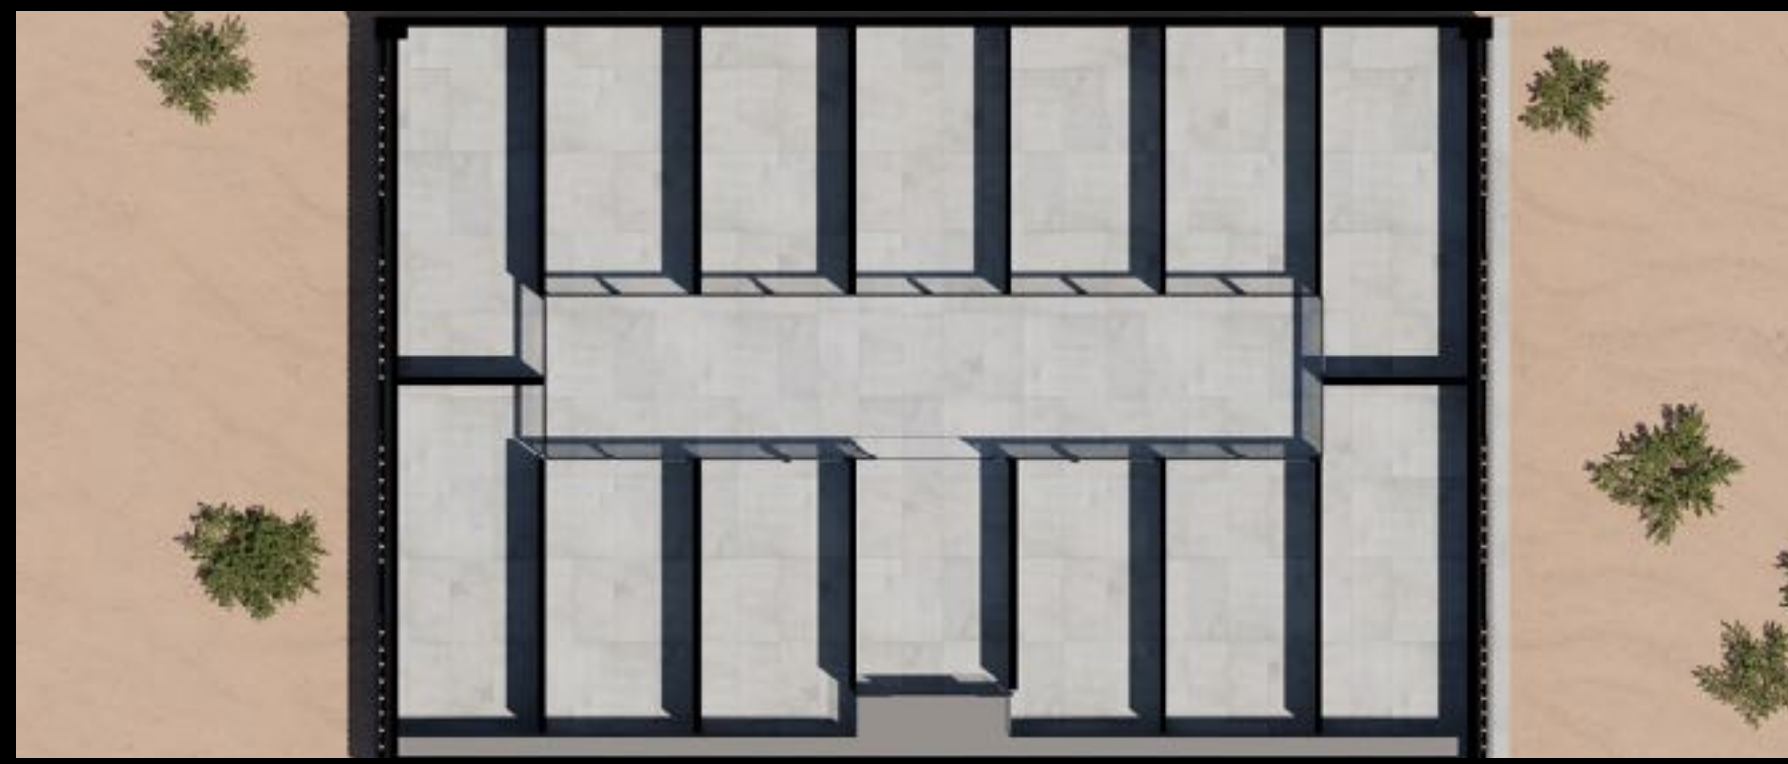

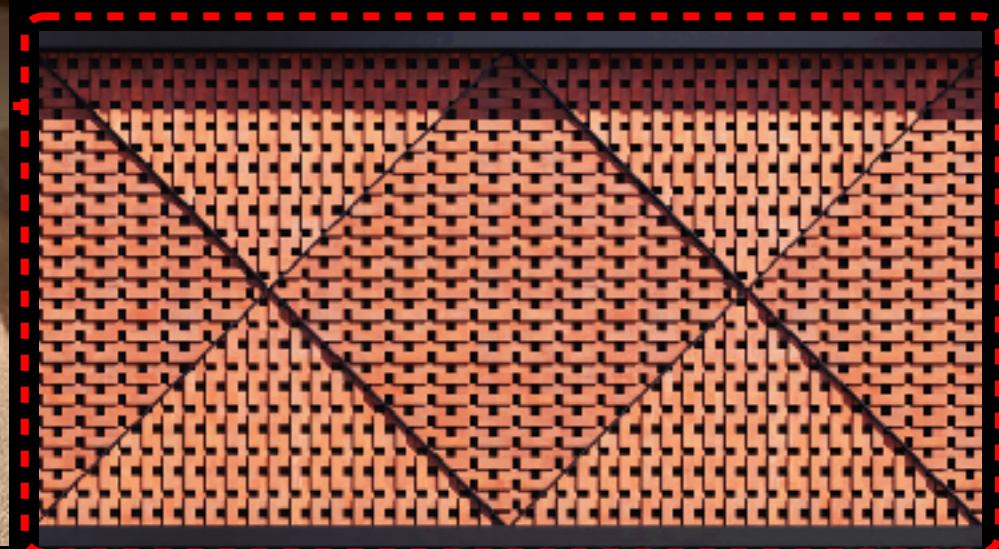

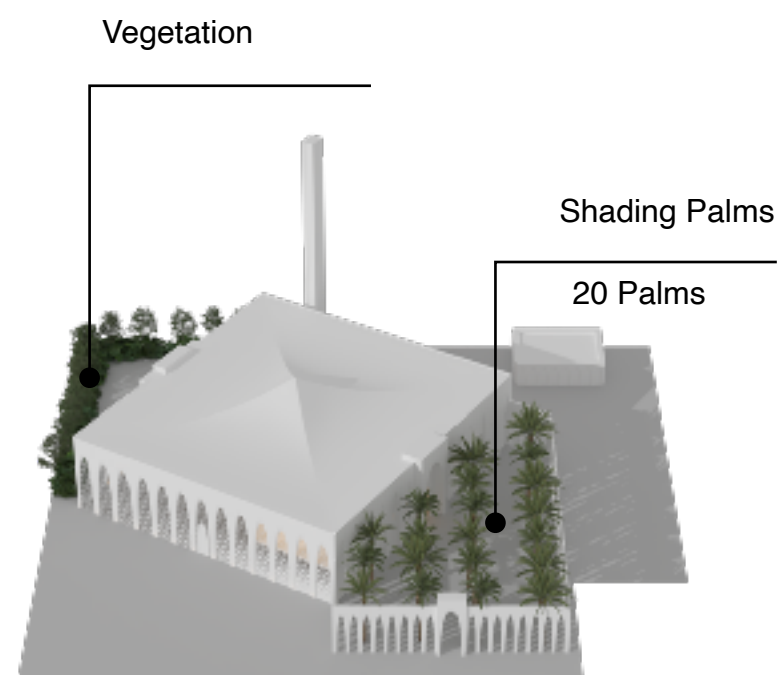

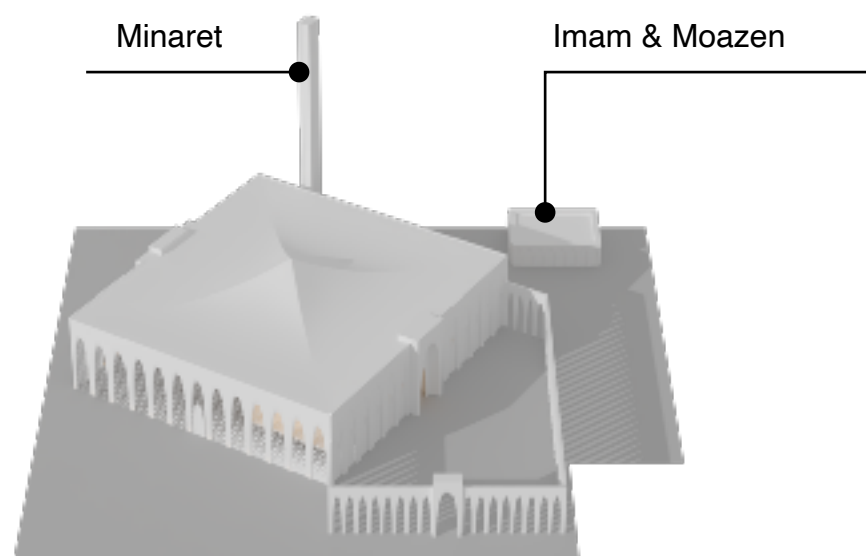

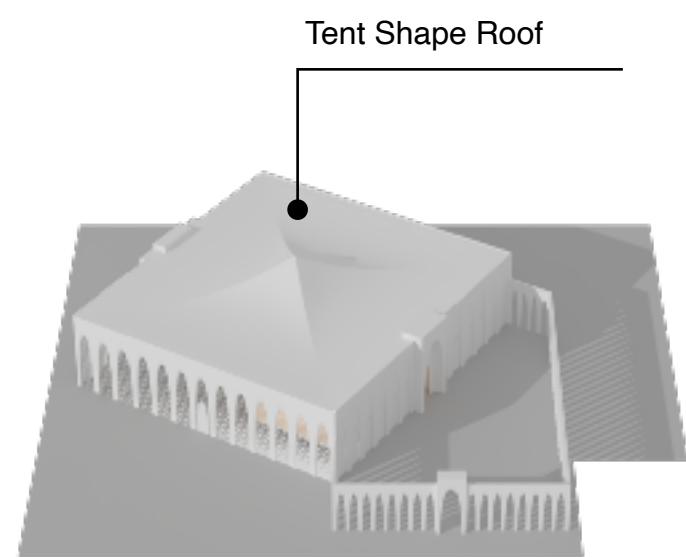

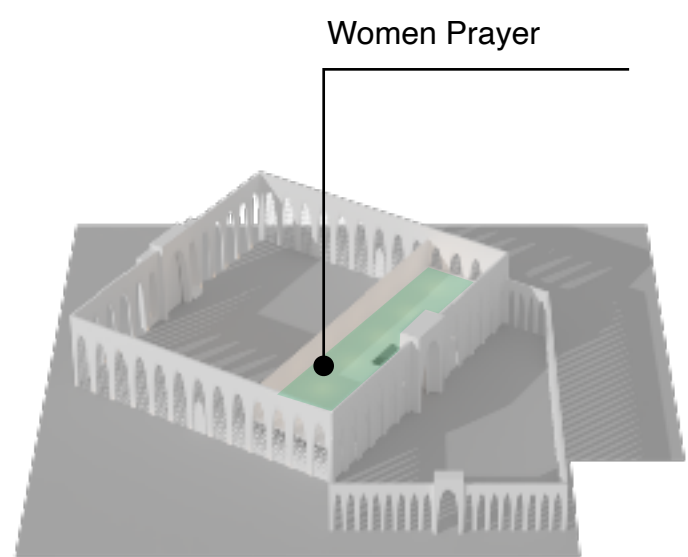

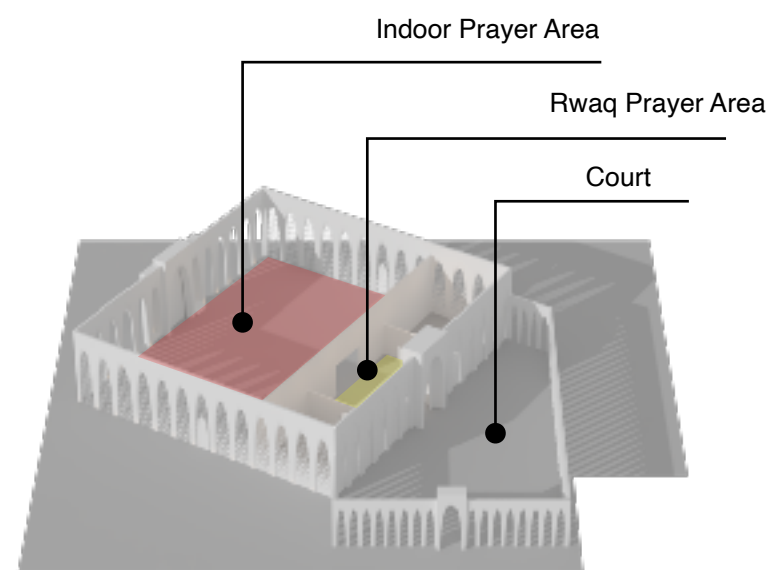

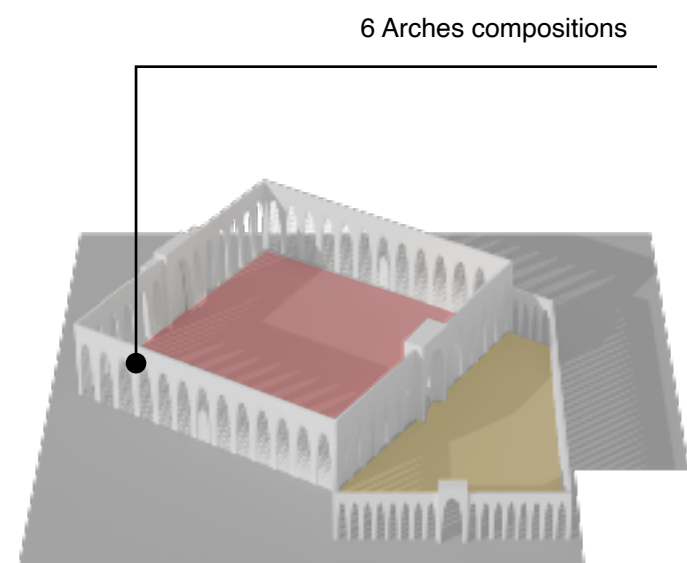

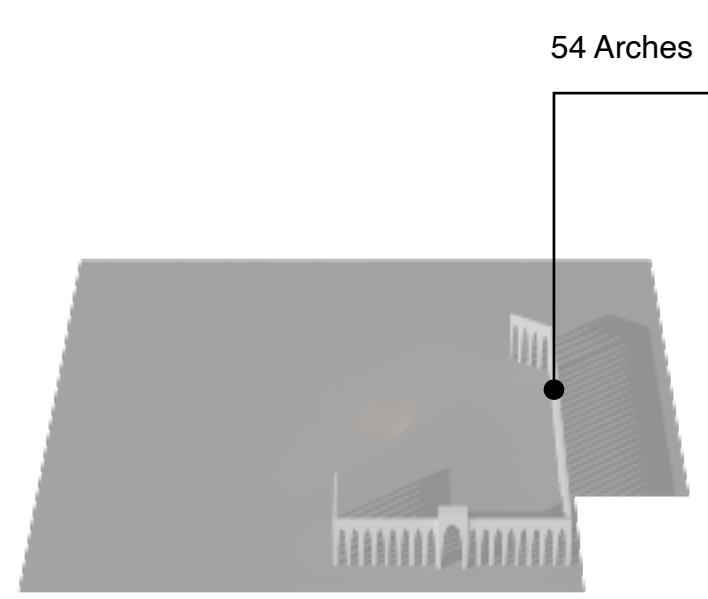

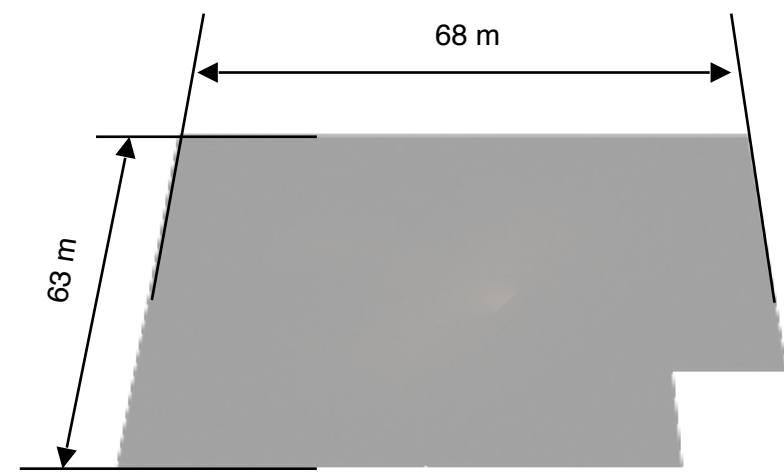

المذخر
 يشبه هذا النموذج خطين من نمط العويرجان، ويطلق عليه بعض الحرفيين المذخن المبخرة.

MUTHKHAR
 This pattern is similar to two lines of the *awerjan*. Some artisans refer to this shape as the *medkhan* (incense burner).
